Abstract

Citation accuracy is essential for the reliability of scientific communication, yet maintaining accurate citations places substantial cognitive and time demands on authors, reviewers, and readers. Errors such as incorrect metadata, misrepresentation of cited findings, and the continued citation of retracted or outdated literature remain difficult to detect through manual review alone. This project proposes an automated citation accuracy and integrity tool to support responsible citation practices in psychological science. Building on recent computational approaches, the proposed system integrates metadata validation, retraction detection, and methods for identifying potentially irrelevant or misinterpreted citations. From a human–technology interaction perspective, the tool aims to reduce workload and support more reliable scientific communication while exploring the transferability of citation integrity methods across disciplinary contexts.

Keywords: citations, tool, citation integrity

Preliminary (mis) Citation accuracy/integrity tool**Table of contents**

Introduction	1
Introduction	1
Miscitations in science	1
Why miscitations matter	1
Existing approaches and limitations	1
The present study	1
Operationalization and definition of miscitations	1
Taxonomy of miscitation types	1
Coding procedure	1
Inter-rater reliability	1
User survey	1
Methods	1
Participants	1
Materials	1
Procedure	1
Results	1
Awareness and experience of miscitations	1
Tool needs and preferences	1
Software design	1
Design requirements	1
Database	1
Analyzer application	1

Reporter application 1

Validation and testing 1

Discussion 1

Key findings 1

Limitations 1

Future directions 1
